

MEMO

To Dr. M. Harvey Dr. M. Kavanagh Mr. P. Leavens Dr. L. Singleton Dr. J.K. Smith Dr. G. Turner Mr. L. Vallet Mr. E.D. Wesley	From Dr. R.S. Lane BLOOD PRODUCTS LABORATORY 13 February 19 81
--	---

NISS has stated that central controlled funds for research and development are available for appropriate and supported projects. We have been advised to make early application, particularly in areas of development which are applied to production which includes environmental control. Areas such as pyrogens, polyelectrolyte purifications from plasma, preparation of intravenous immunoglobulin or production methods giving high yields of immunoglobulin, all immediately spring to mind as promising areas, but I would like staff to set out projects with a simple outline of protocol which could be submitted to the STC meeting on 4th March.
