ADVISORY COMMITTEE ON DANGEROUS PATHOGENS - AIDS

I entirely agree with everything you say in your minute of 16 August 1983 and I am perfectly content for your paper to go forward as drafted to the ACDP.

As you say, there is the danger that this will be used by HSE as evidence of a continuing need for a joint committee but I agree that we are in fact only going to ACDP because its continuance do exist. If it did not it would be perfectly easy to go elsewhere for the scientific advice we need. It will in fact be quite interesting to see how some members of the ACDP react to this request!
