Dr. F.G.H. Hill,  
Consultant Haematologist,  
The Childrens' Hospital,  
Ladywood Middleway,  
Ladywood,  
BIRMINGHAM, B16 8ET.

Dear Dr. Hill,

As you may know, Sister Marion Gregory has recently reported to us that symptoms of Hepatitis B have been seen in four children who have received Factorate batches X61611, and X60311.

Naturally, we are concerned to document and take any appropriate action in response to such reports and I would appreciate it if you could complete the enclosed forms with respect to the patients showing the reported symptoms.

At present, these batches have only been used at Birmingham Childrens' Hospital. We have no experience with their use in other centres that might help us to assess the risk or identifying which batch might be causing a problem.

Many thanks for your help.

Yours sincerely,

GRO-C

R. B. Christie,  
DIRECTOR OF CLINICAL SCIENCES
