FACTORATE SERO-CONVERSION

At a senior executive meeting in Fort Washington yesterday they have confirmed that we, the company, should, as a policy:-

1. Only supply Factorate heat treated which has been collected from individually tested donors
2. It was also agreed that our heat treatment process is relatively satisfactory and, therefore, there is no compelling requirement to go forward with a product recall
3. Where potency and/or volume requirements demand, we may have to supply non-tested material (PAH not that this could be acceptable but only so long as the hospital clinician is forewarned and has agreed to this)
4. PAH/RBC and Mike Rodell will be visiting the DHSS on Monday at 4pm to review all the data on our heat treatment process
5. The US are organising today a shipment from US to Eschwege for relay to Scandinavia in order that we can comply with our commitment to Inge-Marie Nilsson to exchange her untested material with tested.
