Dr. A.M. Barlow,
Haematology Dept.,
Huddersfield Royal Infirmary,
Lindley,
HUDDERSFIELD,
W. Yorks, HD3 3EA.

14th October, 1986.

Dear Dr. Barlow,

You will probably have received supplies of Koate HT to replace the commercial Factor VIII you were previously using.

With that in mind, please find enclosed the data on virus inactivation by the Koate HT heating process. The two booklets cover the elimination of the AIDS virus. The study by Professor Allain shows that there is no risk of AIDS transmission and a low risk of transmission of Non A Non B hepatitis (found to be 40%).

I hope this information proves useful to you and should you require any further clarification, please do not hesitate to contact me at the above address.

Yours sincerely,

Peter Mooney, PhD, BSc
Senior Sales Representative
