

Handwritten signature

22nd October, 1946.

Dear Dick,

Dr. R.I. Shier (address not given) has sent the following information in reply to an enquiry from Somerset House as to cause of death:

GRO-A

Age 54.

Died at GRO-A, on GRO-A, 1946.

Certified as: Ia. Infective hepatitis +
II. Tuberculous adenitis.

+ Dr. Shier states, "Infective hepatitis was in this case almost certainly due to intravenous plasma which she received 2½ months previously."

You may like to get in touch with Dr. Shier, who obviously practises in your area, to find out more about this case, which might well be one of hepatic necrosis.

Yours sincerely,

(84) W. D. A. M. G. O. P.

GRO-C

Dr. D. Dick,
Regional Transfusion Centre,
Birmingham.
