PQ 418/1994/95
Han Ref: Vol
Col

HAEMOPHILIACS

223 Mr David Alton (LD, Liverpool, Mossley Hill):

To ask the Secretary of State for Health, how many haemophilic patients are known to have contracted hepatitis C as a consequence of contaminated blood; how many are known to have died; what representations she has received from relatives; how she has replied; and if she will make a statement.

MR SACKVILLE

Figures are not available centrally for haemophilia patients who have contracted hepatitis C through contaminated blood, or for those who have died. I understand from the United Kingdom Haemophilia Directors that of 126 haemophilia patients known to have died in 1993, 12 showed the cause of death as liver disease of which hepatitis C may have been the cause. Some representations have been received seeking payments to haemophilia patients who may have been infected with hepatitis C. We have responded that the Government have no plans to make such payments.
