Dear Charlie

Re: William MURPHY, dob unknown,  
94 Hilary Avenue, Liverpool 14

You may recall that a few months ago you wrote to me about the above-named patient of yours with hepatocellular carcinoma. I am now trying to pull together as much information as possible about this particular problem and I would be grateful, therefore, if you could find time to let me have some further details of your patient. These are:

1. Type of bleeding disorder and severity
2. Method of HCC diagnosis and age at diagnosis
3. Year of HCC diagnosis
4. Date (if known) of first exposure to clotting factor concentrate
5. HCV antibody status
6. Hepatitis B status
7. HIV status
8. Alcohol intake (if known)
9. Presence or absence (if known) of cirrhosis

Page 2

10. Alphafetoprotein levels

11. It would also be useful to know whether the patient is still alive or whether he has died.

I appreciate that this might be a bit of a hassle, but I am sure that you will agree with me that we ought to do it.

I look forward to hearing from you.

Kindest regards

F E PRESTON  
Professor of Haematology
