

JUNE 1995

Re Hepatitis C Haemophiliac
Dear Mr. Naring

My husband was a
Haemophiliac, who was infected ^{with} Hep C
from receiving contaminated Blood Products
Factor VIII. He did develop severe liver disease
infection which led to liver cancer this
resulted in his death Sept '94

My husband was one of three Haemophiliac
brothers, all three have died as a result
of receiving contaminated blood Two Brother
Sadly died from H.I.V. Two different virus
from ~~the same~~ ^{this one} product, but with the same
ending.

Another point in this sad case is the
difference in the way the Government looks
at it. The families of have received recognition
for the brothers who died from H.I.V. Myself
and my family are not recognised and the government
say they have no intention of doing so. All the
families are disappointed at their approach
for at the end of the day these brother have
died, we have three widows a 90yr old mother who
has lost her three sons 5 children have lost
their fathers to us there is no difference together
all three brothers ~~all~~ suffered greatly.

The House of Lords held a debate 17/6/95 in which
this case was highlighted, I would ask ~~you to~~
give the case and all other Haemophiliac who
will suffer with Hepatitis C your ~~and~~
consideration to and add your name to the
list of M.P.s who signed the early day
petition 8/6/95 My mother & I have Hep C
myself has written to you about this matter
we were therefore disappointed to see that your
name was not listed as having signed the motion
