6th January 1995

Professor E Preston
Royal Hallamshire Hospital
Glossop Road
Sheffield
S10 2JF

Dear Professor Preston

RE: William Murphy - dob 7.11.34
94 Hilary Avenue, Liverpool L14 6US

Here is the information you requested on Bill Murphy.

He has severe haemophilia A. HCC was diagnosed in 1994 at the age of 60. He is anti HCV positive, hepatitis B surface antigen negative (anti-hepatitis B surface 268), HIV negative, alcohol intake unknown, cirrhosis present, alpha feto protein level in August 1994 was 10,000. Mr Murphy died on the 5th September 1994. It is assumed he bled into his hepatoma or had a retroperitoneal bleed as he was shocked when admitted, however a postmortem was not carried out.

Yours sincerely

Angela McKernan
LOCUM CONSULTANT HAEMATOLOGIST
