Dr. Lushington  
30 Childwall Lane,  
LIVERPOOL, 14.

Dear Dr. Lushington,

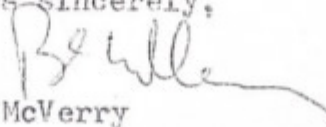

Re: William Murphy  
94 Hilary Avenue, Liverpool, 14.

I do not know if you have received the discharge summary yet, but in summary Mr. Murphy was admitted to hospital for treatment of a bleeding duodenal ulcer. He had a vagotomy and pyloroplasty performed without complications. He had factor VIII cover for his haemophilia at that time. Unfortunately, following discharge from hospital after operation, he developed a further bleeding episode but since then he has had no further problems. To add to his misery he developed a viral hepatitis, presumably from his Factor VIII replacement therapy. He is quite asymptomatic at the present time and feeling very well. Clinically he appears to be recovering from his hepatitis without any problems.

At the present time he is taking a course of Cimetidine and I plan to see him again early in the New Year when he will also be reviewed by the Surgeons. Please let me know if you require any further information.

I have advised Mr. Murphy that should there be a recurrence of his bleeding he should contact us on Ward 7Y immediately.

Yours sincerely,

  
B.A. McVerry

Consultant Haematologist.
