## LIVERPOOL HEALTH AUTHORITY

## CONTINUATION SHEET

SURNAME Mr Mrs Miss	INITIALS	SEX	AGE	WARD	CONSULTANT	UNIT No.
------------------------------	----------	-----	-----	------	------------	----------

DATE

14.1.92

Thank you, Dr. Walde for seeing Mr. Matharu  
To continue as advised.

SMAC

Needs 8+ LFT's., + pre + post factor VIII level

Dr. Matharu  
Louvain' HO.

14.1.92 Haematology review.

Mr. Matharu has developed eczema and edema.

Although he has no palmar erythema, white  
nails and splinter haemorrhages this must be attributed  
to liver disease which is clearly more severe  
than we had appreciated. Haemorrhages and  
physical signs are unreliable indicators of  
the severity of liver disease. Had we appreciated the  
severity of his liver disease we would not have  
proposed surgery in the first place.

I think that his recent bleed probably  
reflects haemophilia, i.e. platelet, initially described  
very likely to liver disease.

I suggest :- Kinetics approximately 100%  
factor VIIIc → 50-100% b.d.  
(4-5 bottles b.d).

for next 2-3 wks.

Vit K 10mg s.c.

I will review tomorrow. I have told him his liver  
disease (of which he is aware) has worsened and is  
contributing to his bleeding tendency. I have spoken

of with his wife and have told her 90%  
 of infection. He and he are also aware of the risk  
 of infection.

Why

15.1.92.

Thank you for seeing Mr Murphy.  
 He had 5 bottles of factor VIII  
 yesterday a.m. & his results were as  
 follows:

pre-FVIIIc 40%  
 post FVIIIc 111%

Had 5 bottles last night.  
 Due to have 5 bottles this a.m.

Na <sup>+</sup> 139	Total bilirubin 35
K <sup>+</sup> 3.8	ALT 43
Urea 2.0	γGT 27
	alk phos. 96
	Tot protein 62
	Albumin 27.

Feels comfortable today.  
 Still has sores & oedema of thigh  
 hepatomegaly. & scrotal oedema.  
 No other signs of chronic liver disease.

Needs PT, APTT today.

Dr. Matthews  
 (Locus 10)
