Dear Charlie

William Murphy, 7.11.1934,
94 Hilary Ave, Liverpool 14.

Diagnosis: Haemophilia.
Hepatitis.
Portal hypertension.
Oesophageal varices.
Chronic venous insufficiency.

I am delighted to report that his venous ulcer is now healed. There remains patchy dry eczema around the right lateral malleolus which we are treating with Propaderm Ointment under weekly 4 layer compression bandages until clear.

I have ordered grade II below knee compression stockings which he should wear for the remainder of his life.

Yours sincerely

Dr C M King FRCP
Consultant Dermatologist
