Dear Dr. Lushington,

re: William MURPHY, 94 Hilary Ave., Liverpool 14

I reviewed this gentleman with haemophilia today. His recent jaundice has completely resolved and our tests have confirmed this was due to an acute episode of hepatitis B. He is now Australian Antigen negative. He has had no further trouble from his ulcer and remains on Cimetidine 400mg nocte. I have checked his liver function tests and he will be reviewed again in three months time.

Yours sincerely,

C. BASS
Senior House Officer
