Good afternoon

As a unrepresented core participant I would like to offer some support to the conclusions that the inquiry has suggested within the email dated 13<sup>th</sup> May 2025

Firstly like so many others the Compensation payment route is now taking far too long and would to me seem that the existing means of selection by random now requires some immediate change , especially towards infected persons but equally also toward Affected Estates Executors and family of deceased persons.

The delay on Compensation reaching the infected people but also the Estates of deceased in my own personal circumstances a child is only causing more extended sorrow sadness & anxieties

I would comment and support the proposals identified on page 3 of the email dated 13<sup>th</sup> May .

- . People identified as having potentially less than 12 Month left to live
- . Persons over age of 70 years infected or affected Estate Executor
- . The infection has never been recognized by interim compensation to the person infected , the Estate of the person [ child ] deceased or a bereaved partner .
- . Any beneficiary of the Estate has been told they have less than 12 Months to live , [ very much my own personal position recently ]
- . Any beneficiary now over the age of 70 years again [ my own personal position ] and become extremely concerned
- . I would support the model proposed where an applicant has more than one claim related to same infection ie Co Infected , Affected , Executor of an Estate

My own thoughts would be for IBCA to put out a typical Claims Manager information request form once any infected person or affected , or Executor is called to commence a Compensation claim. I would hope this would prevent possible delays if a person required to make contact with a hospital doctor or medic to obtain records of information , as i know things currently as they stand no information is available on what questions may be asked by the claims manager .

Hoping the information I have provided will help IBCA to process future compensation claims in a more efficient way

Kindest Regards

Mr William Paterson
