|         |                                                             | Surname      | GRO-B   |
|         |                                                             | First Names  | GRO-B   |
| 20/1/93 | <u>Review</u>                                               |              | Age 21  |
|         | Severe haemophilia A                                        |              | GRO-B   |
|         | HIV+                                                        |              | (In UK) |
|         | HCV+                                                        |              |         |
|         | <u>Haemophilia.</u>                                         |              |         |
|         | Uses monoclate. Only problem joint is                       |              |         |
|         | Ⓡ ankle: had synovectomy 1985.                              |              |         |
|         | Treats bleeds when they occur.                              |              |         |
|         | Uses approximately 36,000 / year.                           |              |         |
|         | Discussed 8SM versus monoclate.                             |              |         |
|         | Discussed HAV & testing & future                            |              |         |
|         | vaccination.                                                |              |         |
|         | Recently won court battle about unearned                    |              |         |
|         | HBV. <sup>wages - won!</sup>                                |              |         |
|         | Had antibody in 1984 129 x BC.                              |              |         |
|         | ∴ <u>not</u> vaccinated. >100 IU 1991,                      |              |         |
|         | HCV Positive.                                               |              |         |
|         | — LFT normal.                                               |              |         |
|         | Discussed what it is & treatment.                           |              |         |
|         | <u>HIV</u> Came from GRO-B in 1984.                         |              |         |
|         | Already on concentrate.                                     |              |         |
|         | Long discussion about treatment.                            |              |         |
|         | CD4+ in Aug. 91 0.3.                                        |              |         |
|         | Wanted to know time to immune                               |              |         |
|         | depression.                                                 |              |         |
|         | Greatest concern = death. Was on                            |              |         |
|         | Zeebrugge.                                                  |              |         |
|         | Has girlfriend GRO-B who does not                           |              |         |
|         | know about HIV (tells screen printer)                       |              |         |
|         | Lives with parents. Both know about HIV.                    |              |         |
|         | <u>FE.</u> No mouth ulcers                                  |              |         |
|         | Skin - 'heat rash'                                          |              |         |
|         | GP prescribed cream which helped.                           |              |         |
|         | Not pruritus.                                               |              |         |
