Dear Dr Twena,

GRO-C

Re: Nicholas HIRSCH (Mr) RFH 223262 – DOB: GRO-C 1976

GRO-C

**Diagnosis: Severe Haemophilia A
Chronic Hepatitis C Infection (Genotype-1)
Early relapser following Pegylated Interferon and Ribavirin for 48 weeks in 2002**

**Medication: Citalopram 20 mg od
Recombinant Factor VIII on demand**

We reviewed Mr Nicholas Hirsch in the Combined Hepatology/Haemophilia Clinic on 19th November 2007. He is reasonable well, and his fibroscan result was 10.5 today. This means there may be some hepatic scarring and this can only really be answered by a biopsy. We plan to perform this via the transjugular route, and Mr Hirsch will have a screening ultrasound. He is away for sometime during February and we will try to schedule it before that.

Yours sincerely

GRO-C

Dr David Patch
Consultant Hepatologist

Dr Thynn Thynn Yee
Associate Specialist
