

19.

Letter of 29th March from Dr. Snell to Dr. Bradley.

"There is nothing new on hepatitis, although apparently irradiation of plasma is now being generally accepted as the best that can be done. Hartman's work with nitrogen mustard is still continuing, I expect to hear more about it at the Atlantic City meetings and will keep you informed."

Dr. Bradley. Thank you. We are watching nitrogen mustard. I think more evidence is necessary before we embark on it here.
