Dear Doctor

I have recently heard that two patients have recently been found to have contracted Non-B hepatitis after transfusion of Kryobulin Batch No. 09M12975. The manufacturers tell me that you were supplied with a quantity of this batch within the past year. I would be grateful if you will check whether any of your patients have contracted hepatitis after transfusions with this batch, and will be grateful for a clinical summary of any cases you find, and also the total number of patients in your unit who were transfused with this material.

Yours sincerely,

GRO-C

J. Craske.
Consultant Virologist
