Cardiff.

Dear Dr. GRO-,

Re: H - d.o.b. GRO-B, 35
GRO-B Cardiff

This 47 year old teacher with severe haemophilia A was reviewed in Professor Bloom's Clinic today.

He has had no new problems relating to his haemophilia, although of course he remains a carrier for hepatitis B virus. Being a well-read man, he is somewhat concerned about the possibility of acquiring the acquired immunodeficiency syndrome, although of course there is no grounds for suspecting the diagnosis in him.

I have taken off blood for the usual tests and we will see him again in six months' time.

Yours sincerely,

GRO-C

M.B. Liddell
Registrar in Haematology
