

31st January, 1986.

BTC/JDH

Dr. J. Craske,
Consultant Virologist,
Public Health Laboratory,
Withington Hospital,
Manchester, M20 8LR.

HLA 3185
HLB 3185
PFC 795

Dear John,

Further to my letter of 23rd September 1985 I enclose the follow up data I promised you.

HLA 3185

	<u>anti HTLV III</u>	<u>Date</u>
GRO-A	Positive	11.11.85.
GRO-A	Negative	4.10.85.
	Negative	22.1.86.
GRO-A	Negative	25.9.85.

HLB 3185

GRO-A	Positive	30.10.85.
	Positive	19.12.85.
GRO-A	Positive	23.9.85.
GRO-A	See above.	

PFC 795

GRO-A	Negative	30.9.85.
	Negative	21.1.86.
GRO-A	Negative	9.10.85.
	Negative	19.11.85.
GRO-A	See above.	
GRO-A	Negative	11.12.85.

/cont....

Dr. J. Craske

2.

This seems to implicate HLA/B 3185 as no patient who received PFC 795 has seroconverted. On the other hand two patients who received HLA 3185, [] GRO-A and [] GRO-A remain seronegative illustrating perhaps that the attack rate is not 100% as we already know.

With best wishes,

Yours sincerely,

B.T. COLVIN, M.R.C.P., M.R.C.Path.,
Senior Lecturer in Haematology.
