-------	--------

This patient with haemophilia has recently moved to this area and registered at our Associate Haemophilia Centre. He was previously registered with you since 1971. I would be grateful if you would kindly send me a summary. His card stated that he has a factor VIII level of 1%, but we found a factor VIII level of 5% and he tells me that he has only required replacement therapy on three occasions, each time after traumatic incidents, and he gives no history of spontaneous joint or muscle bleeds. This would seem to indicate that he has a mild form of haemophilia.

With many thanks for your help,

Yours sincerely,

JANET A. SHIRLEY
CONSULTANT HAEMATOLOGIST.
