| **GP practice** | CHURCHMERE MEDICAL GROUP, SY12 0DB | | |

**Known patient allergies**
Information not available

**Diagnosis:**   **Chronic thrombocytopenia (2006)**
**Mild intermittent neutropenia (2016)**
**Virology testing – suggesting exposure to HCV**
**Atrial tachycardia with variable block (some beats consistent with Wenckebach**

**Clinical summary**

Mrs [ GRO-B ] has indicated she does not wish for haematology follow up. I was asked to see her for a mild neutropenia and a moderate but stable thrombocytopenia. The trends of both have been stable for a while with the neutrophils occasionally getting into normal range. Therefore based on current trends I would advise doing an FBC once a year.

Yours sincerely
