MEMO

To: Dr. Bidwell

From: Dr. W.d'A. Maycock

c.c. Dr. Ellis)
Mr. Vallet) for information
Mr. Wesley)

19th March 1976.

Coagulation Factors, Factor IX
Number of Donations in Plasma Pools

Your memo 4 March 1976.

There is no objection to the final pool being increased to approx. 500L (so that a single driving load is produced) on the understanding that the final pool is prepared from 2 or 3 subpools (eluates) each of which has passed its safety tests, including RIA test for the presence of HB_sAg.
