Subject:

3RD SERO-CONVERSION - DR F G H HILL,
BIRMINGHAM CHILDREN'S HOSPITAL

Date: January 13, 1987

Ref: R5C/EB/10744

Copies to:

Mr J Michelmore
Mr C R Bishop
Dr M Rodell
Ms J Jessler
Mr J Lucas
Dr E Zeiseniss
Dr F Rotblat

You will recall that on October 20 1986, I notified you that Dr F Hill of the Birmingham Children's Hospital had reported by telephone that the third of four HIV Ab sero-negative children had sero-converted to HIV Ab positive.

The other two sero-conversions have been reported to you in detail in my memo of October 14, 1986.

Dr Hill has now sent us a report of this patient's treatment since January 1984, together with the HIV antibody tests carried out.

The patient is aged 8 years, a severe haemophiliac who has been regularly treated at Birmingham Children's Hospital since diagnosed about 7 years + ago.

In December 1984 he was HIV antibody negative. His subsequent tests have been as follows:-

29/9/86	HIV antibody negative (ELISA)
3/10/86	HIV antibody <u>negative</u> (ELISA)
	HIV Surface Antigen - <u>POSITIVE</u>
	Hep. B Core Antibody - Positive
	Hep. B. Surface Antibody - negative
14/10/86	HIV antibody - <u>POSITIVE</u> (FLUORESCENCE and ELISA)
	Hep. B. Surface Antigen - Negative
	Hep. B. Core Antibody - <u>POSITIVE</u>
	Hep. B. Surface Antibody - <u>POSITIVE</u>

Note - Dr Hill has a contact in the U.S. who can carry out HIV Surface ANTIGEN. This child was antigen positive before sero-conversion to HIV antibody positive.

** = Batch also given to Dr. Hill's Patient No. 1

*** = Batch received by both Patients 1 & 2.

1001092 -uk

Cont'd.

The boy has no specific symptoms related to HIV infection at present. I asked Dr Hill if he could send appropriate samples to Colindale for Western Blot confirmatory tests and he agreed.

The boy has not received blood or blood products during the period reviewed above.
