Dear Dr Lane

GRO-A M PN 15

Dr Ian Hann, Consultant Haematologist at this hospital, has been in correspondence with you on this legal claim. Dr Hann replied to your letter of 4th April 1989 on 11th April with the information you required to enable you to answer whether the batches in his letter had been heat-treated or not.

It is now important for us that we have an answer to this question.

I should be grateful if you would let either Dr Hann or I know what your answer is as soon as possible. Please let Dr Hann know if there is a particular problem.

Yours sincerely

GRO-C

Dear Dr. Hann,

GRO-A MPN15

In reply to your letter of 8 March, seeking information on the batches of factor VIII received by this patient: as part of our records, and before we release this information, would you please supply the Blood Products Laboratory with the treatment record of this patient, indicating the number of different types of product to which he was exposed and an approximate figure for the exposure to each.

Yours sincerely,

R. S. LANE.

Dear Dr Lane

Re: GRO-A MPN15

I am involved in a court case at this hospital which regards the treatment of one of the haemophiliacs here who was a patient of my predecessor, Professor Hardisty. The lawyers and administrators of the hospital have required that I carefully research the treatment which he had, particularly in the late part of 1984 and early part of 1985. Records show that he received treatment with the following batches of factor VIII; HLA 3224, HLA 3220, HLB 3204, HLB 3155, HLA 3176, HLB 3191. I would be very grateful indeed if you could let me know as soon as possible whether or not these batches were heat-treated. Initial investigation indicates that he was first found to be HIV antibody positive at this time.

Yours sincerely

MEMORANDUM

TO: Dr R S Lane
cc: Dr T J Snape

FROM: D C Donald ✓
DATE: 14th November 1989

Re: HIV status of donors contributing to 8CRV1526

This is the case of a haemophiliac from the Isle of Wight who apparently seroconverted in 1981 having received only one batch of Factor VIII, Batch Number 8CRV1526, before commencing treatment with 8Y product.

As soon as BPL was advised, Dr Snape wrote to Wessex asking that the HIV status of all donors contributing to the pool, from which 8CRV1526 was prepared, be determined. Dr Jayaswal agreed to check all donors prospectively but did not expect all 1500 donors involved to return.

I recently wrote to Dr Herborn, copy attached, in an attempt to obtain the information required. In his reply, copy attached, the data we require has not been obtained and they do not have sufficient resources to trace all the donors concerned. His opening paragraph is somewhat vague and the inference is that if he receives an official request for the information then he will tackle the problem.

With regard to a subsequent telephone conversation Dr Herborn is extremely sceptical about obtaining information on 1500 donors as more recently Wessex attempted to trace 30 donors, in another context, without complete success.

He also advised me that until recently it has been their policy to retain donor records for seven years and therefore the 1980/81 records maybe in this category. In his view a further complication would be donors with the same name, however, I did not pursue the difficulty that he thinks this would present.

In the light of the uncertainty of obtaining the information on all the donors concerned, would it be sensible to ask him to start checking all the records and, as soon as donors cannot be traced, then halt the exercise. The logic being that even if one donor cannot be traced then the HIV status will never be known and the whole issue will never be resolved.

Please would you advise me of the appropriate course of action.

2nd November 1989

Our Ref:DD1612/SS

Dear Dr Herborne,

Please find enclosed copies of correspondence between Dr T J Snape and Dr U Jayaswal dated 26th September 1985 and 3rd October 1985 respectively.

From Dr Snape's letter you can see why it is so important that the HIV status of donors contributing to batch 8CRV1526 be known.

Dr Jayaswal intended to clear the donors prospectively and as yet there is no correspondence on file to confirm whether this task was achieved.

Please can you check from your records, using the 'Plasma Pooling 8P11' forms enclosed which list the plasma despatch dates from Wessex and the carton serial numbers, the HIV status of the donors involved.

It is appreciated that this involves a considerable amount of work but if prospective testing actually took place then the information may already be available.

I look forward to your earliest reply.

Many thanks.

Yours sincerely,

CONFIDENTIAL

Dear Mr Donald,

Thank you for your letter, dated 2nd November, 1989.

We should be able to trace most of the 1,500 donations but I am fairly certain there would be some donors who would be untraceable. However, this would be an extremely large task and I am afraid we are unable to assist for the time being. If it is still considered necessary to make an attempt to trace the donors, I can perhaps approach various members of our staff who might be prepared to work after hours on this project, although we would not have any funds available to pay them for doing so.

All I can say at the moment is that none of the HIV positive donors detected in this Region have contributed to the batch of Factor VIII in question.

I am sorry that we are unable to be more helpful and I will be telephoning to discuss this matter in more detail.

With best wishes,

Yours sincerely,

MEMORANDUM

TO : Dr. R. S. Lane

FROM : D. Donald

DATE : 21 September 1988

Re : Dr. R. Joshi's letter concerning Factor VIII batches with possible HIV contamination

The two batches of Factor VIII, Batch No's 8 CRV 1512 and 8 CRV 1526, in which Dr. Joshi is interested were manufactured at PFL on the 13th March 1981 and 16th April 1981 respectively. Both batches pre-date heat treatment.

Attached please find correspondence between Dr. T. J. Snape and Dr. Jayaswal regarding the plasma pool used to manufacture 8 CRV 1526. Apparently a young haemophiliac was found to have HTLV-III Ab seroconverted after having received only one batch of concentrate (8 CRV 1526) prior to routine treatment with heated Factor VIII, type 8Y - Product Incident PR32/85. There is no further information on file to confirm whether the plasma donors were traced and cleared for HIV antibody in the pool used to prepare 8 CRV 1526. Also there is no record of the young haemophiliac reported as having seroconverted. This could be the patient to which Dr. Joshi refers.

A batch of Factor IX, 9D2111, was also prepared from the same start pool as 8 CRV 1526 with no adverse reports.

Please advise if you like me to pursue the matter with Dr. Jayaswal.

Dr. U. Jayaswal,
Wessex Regional Transfusion Service,
Coxford Road,
SOUTHAMPTON SO9 5UP.

Dear Dr. Jayaswal,

Further to our telephone conversation recently, I am writing to ask for your assistance in following up a report of HTLV-III Ab seroconversion in a young haemophiliac whose clinical record shows treatment with only one batch of concentrate (8CRV1526) prior to receiving his present course of treatment with heated factor VIII concentrate, type 8Y. Obviously we are anxious to exclude the possibility of transmission of HTLV-III by the 8Y concentrate and to this end, it is important to determine whether any of the donors contributing to 8CRV1526 might since have been identified as being in a high risk category.

The plasma pool used to manufacture 8CRV1526 comprised donations from boxes of single packs listed on the attached sheets. I realize that we are asking you to perform a substantial amount of work, but I think you will appreciate the importance of resolving this particular problem. Obviously if your records show a significant number of donors as having since been excluded as 'high risk for AIDS', it may simply be impractical to cross-check these against the donors included in the pool for 8CRV1526.

I look forward to hearing from you.

Yours sincerely,

OCT 1985

Dear Dr. Snape,

Thank you for your letter and details of the Factor VIII batches. Logistically it is going to be impossible for us to scrutinize 1500 donors from so long ago, and both Dr. Smith and I agreed that we would ensure any of our HTLVIII a/b positives do not include the donors mentioned by checking prospectively. It would seem that the donors of plasma for 8 CRY 528 are due for a donation again within the next few months and hopefully they will be cleared as they come along. I am sure that you will appreciate that it is very difficult to clear them otherwise.

Yours sincerely,

Dear Terry

We have recently investigated a case of possible transfusion transmitted HTLVIII infection. We received a report that retrospective testing of stored serum samples from a bone marrow transplant recipient has revealed seroconversion of the patient. He was transfused with platelets in December 1982 and seroconverted three months later. One of the 108 donations given to the recipient was from a donor who has since discontinued donation and who was found to be anti-HTLVIII positive in late 1984. We believe this donor was responsible for the case of seroconversion in late 1982. Interestingly, the recipient of the platelets (which would have contained only 50 ml plasma) had transiently detectable antibody four days after the transfusion which we presume represents passively transferred antibody. The donor's anti-HTLVIII must therefore have been of very high titre.

The following five titre pools contained plasma from this donor:

2 W0341 FF	(despatched 14.12.82)	→ W86/123
W9322 FF	(24.6.82)	→ W86/124
W8326 FF	(3.12.81)	→ W86/125
W6065 FF	(10.7.80)	→ W86/126

We are, of course, tracing the recipients of the red cells from these donations.

With best wishes.

Yours sincerely

Deputy Director

INCIDENT W86/125.

The pack W 8325 FF was fractionated on 2/12/82 into pool E 3017.

- a) Factor VIII batches HLA and HLB 3017 were made from this pool and issued as follows:-

HLA 3017	230 vials to Leeds RTC (Feb. 83)
HLA 3017	37 vials to Wessex RTC (Feb. 83)
HLA 3017	280 vials to Cambridge RTC (Mar. 83)
HLB 3017	526 vials to Birmingham RTC (Feb. 83).

No follow up of these batches has been arranged as yet.

- b) Cryosupernatant was absorbed to make JD 3017 which was finished as factor IX concentrate Batch no. 9D 2270 and issued as follows:-

206 vials Newcastle H.C. (27/5 and 15/7/83)
40 vials Tunbridge Wells (15/7/83)
40 vials Liverpool (25/7/83)

No follow up of these batches has been arranged as yet.

- c) Absorbed and unabsorbed supernatants were further fractionated into 2 pools as follows:-

L793A	15 bags of Fraction V
L793B	13 bags of Fraction V
L794A	10 bags of Fraction V
L794B	10 bags of Fraction V
L794C	9 bags of Fraction V

- d) L793A was used to manufacture HAS 4.5% AD 1281.
L793B was used to manufacture HAS 4.5% AD 1280.
L794A " " " " " " AD 1282.
L794B " " " " " " AD 1282 and AD 1284.
L794C " " " " " " AD 1284.

Additionally, 10kg of Fraction IV from L794 was sent to Mr. Michael Muir at the Clinical Research Centre, Northwick Park. He has been informed of this incident.

Dear Dr Lane

One of our donors has recently been identified as from a high risk group and confirmed as HTLVII antibody positive (he presented with Cryptosporidiosis).

I list the following five donations - plasma from these was sent for processing:

26.7.84*	Time expired plasma (N6403 TE)	Despatched 31.7.84 ✓	1m N85/201
12.1.84	5L plasma pack (A8157 FF)	" 24.1.85 ✓	1m N85/202
28.7.83	5L plasma pack (A8023 FF)	" 2.8.83	1m N85/203
21.1.83	5L plasma pack (A7199 FF)	" 1.2.83	1m N85/204
2.7.81	5L plasma pack (A5199 FF)	" 6.7.81	1m N85/205

* Recipient HTLV III seroconversion confirmed by Dr Tedder

The recipient of the red cells from the donation dated 26.7.84 has developed AIDS and I have heard today that the patient has seroconverted and Dr Tedder has detected antibody to HTLVIII. (There was previously doubt locally as to his antibody status although the clinical manifestations left little doubt).

Yours sincerely

GRO-C

(75) ✓

Plasma Incident N85/204.

This donation went into a 5-litre pack prepared on 1.2.83 and fractionated at BPL. The unheated Factor VIII concentrate was despatched to Sheffield (310 vials HLB3054), to Newcastle (539 vials of HLA3054) and to Lord Mayor Treloar Hospital (214 vials HLB3054) in July 1983. Dr. Snape wrote to Dr. Wagstaff, Dr. Collins and Dr. Aronstarn advising them of the problem and recommended that the individual haemophilia centre directors contact John Craske for advice on follow-up.

The cyrosupernatant was not used to prepare Factor IX concentrate (nor were any clotting factors other than Factor VIII prepared). Fraction II was not recovered for the manufacture of immunoglobulins. Fraction V was generated and used in the preparation of Human Albumin Solution 4.5% (AD1310, AD1311, AD1312, AD1322) which has all been issued. Additionally, reject bottles from these batches have been used to make up subsequent H.A.S. 4.5% batches. Assuming albumin products do not present a risk, no further action has been taken other than to record the destination of the primary four batches.

All samples of intermediates have been recovered. No products for non-clinical applications were made.

Dear Richard

We had a positive anti-HIV donor recently. Her last donation was on 12.3.84, Donation 283772, and fresh plasma was removed and included in Batch C S662 FF, pooled on 13.3.84 and sent to you on 20.3.84.

I think it is very likely that this donor was infected following this donation but obviously we cannot be absolutely certain regarding this.

Yours sincerely

GRO-C

Dear Dr. Snape,.

I am sorry to tell you that we found another blood donor who is HTLV III Positive. Fortunately he has had only two previous donations but one of them I am afraid was sent to you. This was blood taken on the 1.5.85, the Group was O Positive, the unit No. was 707273J2 and was sent to you in Batch No. 7J001305SM on the 3.5.85.

Yours sincerely,

GRO-C

Dr. A. Gorman, FRCPI, MRC(Path).
Consultant Haematologist.

INCIDENT

JB6/186

The pack/donation 7J13055M (70727352) was fractionated on _____
into pool 8Y3344

- a) Factor VIII batches 8Y 3344 were made
from this pool and issued as follows:-

_____	_____	vials to _____	in _____
_____	_____	vials to _____	in _____
_____	_____	vials to _____	in _____
_____	_____	vials to _____	in _____
_____	_____	vials to _____	in _____

- b) Cryosupernatant from this pool was/was not absorbed to make
JD 3344 which was finished as Factor IX concentrate batch 9A 3344
and issued as follows:- had been rejected.

_____	vials to _____	in <u>12</u>
_____	vials to _____	in _____
_____	vials to _____	in _____
_____	vials to _____	in _____
_____	vials to _____	in _____

12th June, 1989.

Dear Richard,

re: Haemophiliac suing the Yorkshire Regional Health Authority

The patient concerned had received the following factor VIII concentrates apart from the NHS Batches I have already informed you about.

Baxter Healthcare (Travenol) 1980 - 1981
(Haemofil)

Armour Pharmaceutical Co. 1979 - 1985

Cutter Biological Ltd. 1981 - 1987
(Koate)

The vast majority of material he did receive however was the NHS fVIII so I would appreciate a reply with regard to the list of batch numbers I've sent you. Incidentally, I have received replies from all the above firms. Baxter cannot trace the batch numbers as they say the batch number configuration recorded does not tally with any in their records. Both Cutter and Armour have traced the batch numbers recorded in this case and although some were prepared prior to HIV testing they claim that none of these batch numbers were associated specifically with any cases of HIV seroconversion in Haemophiliacs.

Best wishes.

Yours sincerely,

GRO-C

Dr. E. Angela Robinson,
Director/General Manager

P.S. for your estimate of the exposure this patient has had, I enclose a copy of his transfusion record - maybe you can interpret it better than I!

5 of these batches have anti HIV
incidents.

Please see the attached 5 letters
describing the plasma donor's
status. Incident 3 is of particular
concern as the recipient of a red
cell transfusion died of AIDS and the
plasma was transfused into HLB 3054

15th March 1989

Richard
Dear Dr Lane

Dr Tovey wrote to you on the 11th October 1988 regarding a haemophiliac who is suing the Regional Health Authority because he has become HIV positive after receiving Factor VIII. Included with this letter was a list of batch numbers of NHS Factor VIII which he has received over the past few years and we asked if any of these could have been the source of his conversion.

I would appreciate an early reply to this letter and enclose a further copy of the batch numbers involved.

Thank you.

Yours sincerely

3182

3215

ACTION TO BE TAKEN. Mr. Lipscombe will phone Dr. Lane on Friday morning regarding the above enquiry.

FOLLOW UP.

NAME.

TIME.

DATE.

COPIES TO.

RSL/AH

4th April 1989.

Dr. E.A.E. Robinson,
Regional Transfusion Centre,
Bridle Path,
Leeds LS15 7TW.

Dear Angela,

In reply to your letter of 15th March regarding the haemophiliac suing your RHA, to complete our records and before we release the information, the Blood Products Laboratory requires information on all the products to which this patient has been exposed and an approximate estimate of the exposure. I look forward to your reply.

Yours sincerely,

R. S. LANE.

12th June, 1989.

Dear Richard,

re: Haemophiliac suing the Yorkshire Regional Health Authority

The patient concerned had received the following factor VIII concentrates apart from the NHS Batches I have already informed you about.

Baxter Healthcare (Travenol) 1980 - 1981
(Haemofil)

Armour Pharmaceutical Co. 1979 - 1985

Cutter Biological Ltd. 1981 - 1987
(Koate)

The vast majority of material he did receive however was the NHS fVIII so I would appreciate a reply with regard to the list of batch numbers I've sent you. Incidentally, I have received replies from all the above firms. Baxter cannot trace the batch numbers as they say the batch number configuration recorded does not tally with any in their records. Both Cutter and Armour have traced the batch numbers recorded in this case and although some were prepared prior to HIV testing they claim that none of these batch numbers were associated specifically with any cases of HIV seroconversion in Haemophiliacs.

Best wishes.

Yours sincerely,

GRO-C

Dr. E. Angela Robinson,
Director/General Manager

P.S. for your estimate of the exposure this patient has had, I enclose a copy of his transfusion record - maybe you can interpret it better than I!

2nd November 1989

Our Ref:DD1608/SS

Dear Dr Whitmore,

Regarding your letter addressed to Mr J Strohm dated 6th October 1989 and our telephone conversation of 31st October 1989.

I would be grateful if you could write to our Director, Dr R S Lane, outlining the information you require and the reason behind the request. From our discussion I understand you have been given a lengthy questionnaire to complete which includes the provision of detailed information concerning the heat-treatment of Factor VIII batches but I am uncertain about the source of the questionnaire.

Any delay in our response will be due to our legal advisers vetting the reply and I apologise in advance for any inconvenience this rather lengthy procedure may cause.

Yours sincerely,

GRO-C

David C Donald

Dear Mr. Strohm,

Enclosed is a list of Factor VIII concentrates used at Lewisham Hospital during 1984 and 1985. I would be grateful if you could indicate which of these were heat treated as there have been some queries about this relevant to the current litigation.

Yours sincerely,

GRO-C
