WITNESS DEPOSITION

Depositions of witnesses produced, sworn and examined this

day of 2000 at the Coroner's Office, in

the County aforesaid before me LEONARD MALCOLM GORODKIN Esquire,

Coroner for our Sovereign Lady the Queen within the said County, touching the death of

GRO-A

I

GRO-A

being sworn say

I am of age and I reside at GRO-A Manchester

the body now lying dead at Manchester Royal Infirmary mortuary

is the body of GRO-A

who died on the GRO-A day of GRO-A 2000 instant at

Manchester Royal Infirmary

and who at the time of his death was the age of 44 years

and was a married man a Electronics Engineer.

Who was born on the GRO-A 1956 at Manchester.

He resided with me at GRO-A Manchester.

I identified his body to a Police Officer.

CORONER'S CERTIFICATE AFTER INQUEST

My full name is

GRO-A

My date of birth

GRO-A 1972

I reside at

GRO-A

Manchester

My husband

GRO-A

was born on the

GRO-A

1956 in

GRO-A

Manchester

The third eldest of four children. One brother, two sisters. GRO-A's brother GRO-A was also diagnosed Haemophilic. He died when he was forty.

GRO-A was born at home. He was a normal birth with no complications.

He attended Primary School in

GRO-A

At the age of about nine, he attended school in

GRO-A

a school which catered for the Physically handicapped

Then he went to college in

GRO-A

Hampshire.

When GRO-A was quite young his parents were concerned as to why GRO-A bruised very easily also bruises appeared without cause or apparent reason

The GP referred him to MRI where he was diagnosed with Haemophilia. There was no history on his mother's side of the family of this disease.

When she was tested the results revealed she was carrying the disease, but this was mutant.

He was in Hope Hospital under observation on a couple of occasions, also he was in Pendlebury Children's Hospital.

The above came from his father who has since died.

GRO-A

Continuation of Statement of

He attended the MRI Haematology Department on a regular basis. GRO-A was a happy child and enjoyed his young life. He found it difficult to find employment because of his medical problem.

He did work for various companies as an Electronics Engineer.

When I met and married GRO-A on the GRO-A 1992 in Swinton Registry Office, GRO-A told me everything about his medical condition. We have one child, a son GRO-A now aged two.

We were still married altho reported as the live & his death

Over the GRO- years GRO-A and I have been married, he has been in the MRI several times for treatment for his Haemophilia. In 1990 he was diagnosed HIV. He was told this was through contaminated blood and he could have actually had this condition for a couple of years.

He had been given Factor 8 which was given a lot of publicity in the 1980's. The Factor 8 being from America. He discussed this at lengths with MRI.

GRO-A had a breakdown in December 1991, he was admitted to Meadow Brook (Hope Hospital, Salford). He was in Hope Hospital until March. 1992. *This was a severe situation & not related to his condition.*

He was treated for his physical and Psychological problems. I am not sure what medication he was prescribed. He was sectioned just to stop him leaving the Unit.

He appealed against his Sectioning *& as a result he was successful and*
~~He~~ was discharged end of March. 1992.

He attended MRI Haemophilia Centre on a regular basis.

Then 1997 his blood count dropped. He was told that to decrease his viral load and increase his CD4 count, that it would probably be beneficial for GRO-A to have triple therapy. He agreed to have triple therapy. Then in September 1997 he was admitted to MRI with severe Anaemia. They ran a battery of tests to find the cause of severe bleeding. GRO-A was convinced it was one of the treatments which had caused this. *He was given a prostate antibiotic & he believed this was making him ill.*

He seemed fine, things went well for a while.

GRO-A

Continuation of Statement of

In November 1997 he had a body scan which showed Lymph nodes were enlarged Initially it was thought this could be a form of Cancer Non-Hodgkins or Bird T B. Further tests proved conclusively it was Bird T.B.

He was given more antibiotics. Then he was discharged at the end of that week. Then in June 1998 he went into MRI. He had severe Candidiasis in his throat and Oesophagus.

He was treated with antibiotics via drip. His triple therapy was changed because he had now become immune to the previous drugs. He was in MRI for about two weeks until his condition cleared Then on the 22 November 1999 I knew GRO-A was having another breakdown. He wasn't sleeping, he was out of touch with reality. He trashed the house, he was moody, a bit difficult. I had problems all weekend trying to get out of hours doctor I was told there was nothing they could do until Monday

The GP called to visit GRO-A on Monday about 4pm. I stayed at the surgery When the GP, Dr GRO-A returned to the surgery he told me that GRO-A was troubled and he would get in touch with the Duty Psychiatrist.

He was admitted to Leigh Infirmary as a voluntary patient.

On the Friday 26 November '99 the hospital contacted me to tell me they had sectioned GRO-A to ensure he wasn't able to leave. He said he wanted to come home. The following Tuesday I went to visit GRO-A I was appalled at what I saw He was sat on a chair slumped over a table. He was obviously drugged, there was saliva coming from his mouth. I could get no response from him. I spoke to the Psychiatrist.

I told him GRO-A had stopped taking his medication, only his class A drugs, not his anti-viral, over the weekend. He had asked me about this. He told me his blood pressure had dropped dramatically, but that he was taking all his medication. There was no doctor visiting GRO-A He was only seen by the Psychiatrist

I feel he should have been seen by a doctor not just a Psychiatrist.

Continuation of Statement of

did not know [GRO-A] had gone missing. It was only when my neighbour took him back they realised he had gone missing. They said they had no contact numbers for me. They later apologised and said they had found them.

[GRO-A] was apparently admitted to MRI on Friday 17 March with a chest infection. Neither Leigh

Infirmary nor MRI let me know. *I didn't hear for five days. I was still available but I was told that as we were searching it was none of my business.*

On Wednesday [GRO-A]'s Social Worker Sarah HOLGATE phoned me about 9.45 a.m. She said do

you know [GRO-A] is in Hospital (Ward 14). I telephoned MRI. I spoke to a nurse, she said [GRO-A]

was very poorly. [GRO-A] wants you with him and would I come. I went immediately. He was in ITU.

He was not conscious. Then on [GRO-A] 2000 the hospital telephoned at about 1.30 in

the early hours, to say [GRO-A]'s condition had deteriorated. They said his kidneys had started to fail.

Then on [GRO-A] 2000 the doctors told me they had tried everything and nothing was working.

They said his lungs had failed also his liver.

He never regained consciousness, the doctors said they were withdrawing medication and they

would just keep him free from pain and let nature take its course.

I was with [GRO-A] when he died.

I feel I was robbed of 5 days to my L.

I was given a certificate for the hospital to take to the Registrar. The Registrar asked me if [GRO-A] had been infected by blood products & I said he had. The Reg then referred the matter to the coroner's office.

Mr. Thorneley - His physical condition before gave the Leigh. He needed high therapy for his pain. Therapy administered by MRI. His physical condition was OK - He had check-ups every week.

GRO-A

Continuation of Statement of

(They took off the medication after 1/11/00)

I telephoned the Macfarlane Trust, the next day and told them about the situation. They said they would write to MRI, tell them of my concerns and how I had found GRO-A when I visited him. Also about his triple therapy. This was due for renewal because he had become resistant to his present medication

I relayed my concerns to Dr HAY at MRI and also to the staff at Leigh Infirmary. Also the Macfarlane Trust said they would write a letter on my behalf to the MRI about my concerns. Around Dec '99 several appointments were made by Manchester Royal whilst GRO-A was in Leigh, but these appointments were cancelled by Leigh Infirmary, the reason given was GRO-A was mentally not fit to travel. Then in January 2000 he taken by hospital transport from Leigh Infirmary to MRI as a day patient for blood tests and checks.

I was told at the end of February this year, by Leigh Infirmary that MRI had put GRO-A on a new combination therapy. The day after GRO-A rang and told me he had come out in a rash. I telephoned the staff about this. They assured me they had been in touch with MRI who said the reaction was probably caused by the new triple therapy and the psychiatric treatment.

They said they would take him off the triple therapy and look at what they could do.

I was assured he had been put back on triple therapy, it was following GRO-A death I found out he was not on any therapy only for his psychiatric therapy treatment. I am very upset that I was not made aware, being his next of kin, that they had taken him off his medication

Then about the beginning of February I returned home from shopping. A little while later a neighbour phoned and said do you know GRO-A had been home, he had called at her house. GRO-A was asking where I was. Another neighbour took him back to Leigh Hospital by car. He was freezing cold, he wasn't suitably dressed

I telephoned Leigh right away, they did not know GRO-A was missing. He had apparently been given Section 17 that day which means he could walk around the grounds freely for an hour. They

Manchester

Clubs Richard Martin Hay a ok

Dear Mr Gorodkin

Re: GRO-A dob GRO-A 56
GRO-A Manchester

Date of Admission: GRO-A 2000

Date of Death: GRO-A 2000 at 06 50 hours

Mr GRO-A was a gentleman well known to our department, with severe haemophilia and HIV, presumably acquired from blood product treatment in the early 1980's. His HIV status was confirmed in 1985. He started on antiretroviral triple therapy approximately two years ago and although he tolerated this reasonably well, he was clearly partially resistant to treatment with an extremely low CD4 count and a viral load, which was most recently measured at 121,000 copies/ml. He was therefore profoundly immunosuppressed.

He had a long standing psychiatric history and was recently admitted under one of the provisions of the Mental Health Act to Adlington Ward, Leigh Infirmary, for treatment of an acute psychotic episode, characterised by mania and paranoia. He had been an in-patient in Leigh Infirmary for a period of at least three months, during which time we had reviewed him intermittently as an out-patient.

On GRO-A 2000, Leigh Infirmary contacted us to say that he had developed a chest infection and he was promptly transferred to Manchester Royal Infirmary. There was a two week history of a chest infection, which had been initially treated with oral Ciprofloxacin, but failed to show any improvement with this. In addition, there was a history of a fall earlier in the day.

On examination, Mr GRO-A was in pain in his leg, with no obvious haemarthrosis. This was initially treated as a possible iliopsoas bleed, with factor VIII replacement. An ultrasound scan of his leg, later that day, revealed no significant bleed. To cover any undetected bleed, factor VIII treatment was continued for the subsequent three days. Mr GRO-A is normally on 60mg MST bd. Due to his pain, this was increased to 90mg bd on admission.

Respiratory examination revealed a hoarse voice and inflamed throat. Auscultation of his chest revealed widespread crepitations, with no focal signs. Chest X-Ray revealed diffuse interstitial shadowing, with no focal consolidation. The impression was that of a low respiratory tract infection. Mr GRO-A was commenced on IV Cefotaxime and Clarithromycin.

Manchester Royal Infirmary
Oxford Road, Manchester, M13 9WL

Tel: 0161 276 4812/3 Fax: 0161 276 4814/4088

Over the weekend, Mr GRO-A remained hyperpyrexial, with signs of progressive respiratory distress. Mr GRO-A was noted to be becoming increasingly drowsy. Due to progressive respiratory compromise and increase in requirement for supplemental oxygen, Mr GRO-A was transferred from GRO-A to the Intensive Care Unit on the GRO-A 2000. On Intensive Care, Mr GRO-A required full ventilatory support with Noradrenaline to maintain his blood pressure. IV Pentamidine and Amphotericin were added to cover a broader spectrum of potential respiratory pathogens. Despite continuing respiratory support, Mr GRO-A continued to show respiratory deterioration with evidence of multi-organ failure secondary to sepsis.

In view of the progressive deterioration and on discussion with Mrs GRO-A, the decision was made not to pursue any further aggressive intervention. Mr GRO-A continued to deteriorate and was pronounced dead on GRO-A 2000.

It is my information, that his 'section' expired during his stay at Manchester Royal Infirmary and was no longer in operation at the time of his death. I don't think any provisions of the Mental Health Act apply in this case.

In our view, his death was caused by fulminant pneumonia, unresponsive to intensive antibacterial therapy and ultimately complicated by adult respiratory distress syndrome. We listed the causes of death on the death certificate as:

1. Pneumonia
2. HIV
3. Haemophilia A

Factor 8 deficient for HLA 'A'

I am informed that it is your intention to hold an inquest. The cause of death here, is not in doubt and we did not request a post mortem. I do not understand why an inquest is necessary. I don't think we are going to learn anything new from such a process and I am concerned that it would only serve to cause the bereaved further upset. I would welcome the opportunity to discuss this with you further.

Yours sincerely

I wanted help to send him to MARI to review his therapy. I told the M. help he was due to have therapy reviews. help if they would arrange it. The appointments were cancelled as I.D. They didn't have enough staff. I did check a list of they didn't send him. After that they sent him.

This was Mr. Farly I believe. I was concerned about the triple therapy - Harvey needed it to be changed. I don't know if Dr. H. changed the therapy - I don't go to him. In Feb. Harvey said the 3rd therapy had been changed.

I got a visit of the councillor at MARI - & she he was in ICU I spoke to her & she said that he had been a 3rd therapy for some time

Dr. Hays (1)

We believe his HIV did cause Factor 8 deficiency
we have no other reason to consider it

I believe the predominant medical cause was
his pneumonia. (a) Pneumonia

(b) HIV Human

(c) Haemophilic A factor with Factor 8

HIV was a factor in the severity of the
infection had he been HIV negative he would not
have died so fast.

McDonley. We have dealt with a number of Haemophilus
and HIV for Factor 8. He was infected between
1980 + 1984 - He was positive after birth in March 1981
The peak year for infection was 1982 to 1983.

He was immuno depressed. He had opportunistic
infections. He had once a fungal infection Candida
which caused a bleed. He had full blown AIDS by
1997. He was very resistant to some drugs & was
resistant to changing his treatment. I was trying to get him
to change his treatment. I saw him a few times &
more times. Mostly his belief he was a 3rd degree

12 May 81

Heigh asked us based details of his therapy. We
forwent them. We changed the Naps - We stopped
them all when he had a rash - 2nd the Cols we
changed his treatment again.

We did stop his drugs when he came to HRI
when heigh stopped the Naps I had confused they
shouldn't.

On the 2nd day I changed his Naps - to 800-
a rash & so I sd stop the Naps. He came back to
us on the 6th day - We didn't need to see him right
away. A wk or two of the treatment would do
the patient any harm. - There are many reasons
to give a drug therapy. - we wouldn't start
Naps again until the rash had gone.

It is long in treatment.

When Henry was admitted we tried to get hold of
Mrs GRO-A - We left messages on her phone. We
couldn't contact her for several days. We didn't
say it was none of her business.

The alcohol in his treatment made no
difference to the outcome. It didn't influence the outcome.

The psychiatric medication was affecting him. He
wasn't drinking. Sometimes he lost & on like &
was droney - when I saw him he was very agitated

On Aug 3.

→ He became more wary.

2000

Mr S Chadwick
HM Coroner's Office
5th Floor
City Magistrates' Court
Crown Square
MANCHESTER M60 1PR

Dear Sir

DOB 56.
DECEASED

Thank you for asking me to do a Report on the above named, who had received Psychiatric care under myself at Leigh Infirmary. The following is the Report of s care whilst he was an In Patient in Leigh Infirmary.

I first saw at his home on 1999, at the request of his GP - Dr .

The information that was provided to me was that had suffered from haemophilia and had needed blood transfusions in the past and unfortunately, as a result of that, he had contracted HIV positive and also Hepatitis B and Hepatitis C positive.

was also receiving anti-viral treatment and was under the care of Consultant Haematologist, Dr Hay in Manchester Royal Infirmary for haemophilia. He was also known to Dr Leech, from the Drug Dependency Clinic in Leigh as had been prescribed medication for pain relief and at

PTO...

GRO-A

cont...2

that time he was receiving MST 300 mgs a day, DF118 30 mgs 20 tablets a day and Temazepam, 15 tablets a day of 20 mgs each.

GRO-A was ill with physical problems and to make matters worse, he was also presenting severe mental problems at the time.

PRESENTING MENTAL PROBLEMS THEN WERE AS FOLLOWS –

GRO-A was grossly deluded and hypomanic and we wondered if the drugs he was already prescribed were partly to blame. However, he was severely ill with haemophilia and was in severe pain a lot of the time and needed the medication.

PAST HISTORY OF A SIMILAR EPISODE IN 1997

This was the last time GRO-A was admitted and treated as an In Patient at the Meadowbrook Unit at Hope Hospital and at that time GRO-A lived in that catchment area, but had moved to live in my catchment area and therefore, I had got involved in his care.

GRO-A had become extremely agitated and had not slept and he had fixations about electronics, especially mobile telephones, he thought there were controlling system channels in the atmosphere. He also thought that young people were disrupting these channels and bringing down aircrafts and interfering with mal-functioning various processes.

GRO-A thought that the central heating and the gas fire were not ventilating properly and he thought he was an electrician expert and was trying to deal with the problems at home.

I was informed that GRO-A's Wife had moved out of the house because of his criticisms – she was not able to live there any longer, because she was afraid of him; he was shouting at her and he had become so unpredictable that she had asked for help and was seeking refuge with a relative at that time. When GRO-A was faced with difficult questions, he moved from subject to subject, incomprehensively, and he had stopped taking all his medications.

PTO...

GRO-A

cont...3

Before going to see GRO-A on the Domiciliary Visit, I had a telephone conversation with him, asking him how he was and that I would be visiting him, but he was not keen on my visit and starting copying my Indian accent and making fun of me and saying there was no space in his Diary and that he could not see me.

It was quite apparent that he was Hypomanic and would be quite difficult to assess and therefore, I requested Social Workers from Brooklea CMHT to accompany me to see GRO-A and so I went along with Sarah Holgate and Senior Social Worker, Mr Stuart Anderson, to see him at home and they had already approached Dr Leech from the Drug Dependency Clinic to be at the house when we visited. At approximately 1 p.m. we all met up at GRO-A's house and we tried to persuade GRO-A to come into Hospital for psychiatric help. GRO-A cried on Dr Leech's shoulder as he had known Dr Leech for some time and we three were relative strangers to GRO-A. Therefore, when Dr Leech requested GRO-A to come into Hospital, he agreed only if Dr Leech would take him to Leigh Infirmary personally, himself, which Dr Leech did.

MENTAL STATE EXAMINATION

GRO-A was dressed in trousers but wore a dark black coat with nothing on his upper body. He had not taken care of his appearance and had neglected himself. His mood changed very rapidly and he would cry and then suddenly stop and then went onto doing something else. He did not appear to have hallucinations. His concentration and attention was impaired to some extent and he had no insight into his problems.

It was apparent that GRO-A was Hypomanic and had Mood Affected Disorder, that is, he had Mania with Psychotic Symptoms.

GRO-A agreed to come into the Hospital voluntarily as Dr Leech had brought him along, but after coming in, soon a Section 3 of the Mental Health Act had to be applied, as GRO-A was not prepared to stay on the Ward and he needed to be looked after and have treatment.

PTO...

GRO-A

cont...4

Soon after GRO-A was brought into Hospital, I wanted to see his Wife, GRO-A, in order to get more information and have communication with her and see what we could do to help.

I spoke to GRO-A on the phone and requested her to come for the Ward Round and discuss what her views were about GRO-A and his care whilst he was with us, in order to do whatever we could possibly do in the best interest of GRO-A

I always see relatives in my Ward Rounds and I am quite happy to discuss with them any of the views and concerns about the on-going treatment and patients stay in Hospital.

GRO-A however, never came to any Ward Rounds but I used to have telephone conversations with her discussing GRO-A's on-going medical and mental problems. She had said that they had a young child and she was not able to leave that child and come to the Ward Round, therefore, I was quite happy to discuss on the telephone whatever we were trying to do to help GRO-A and what she wanted us to do and the feasibility of trying to help GRO-A given our resources at this Hospital.

I was also in close contact with Dr Hay from Manchester Royal Infirmary because GRO-A needed Factor 8, which is an injection he would need if there was bleeding. Dr Hay and her Team always advised us on the telephone and were quite happy to see GRO-A at very short notice; in fact, Dr Hay and her Team had seen GRO-A as an Out Patient several times at my request and that of GRO-A himself, when he became concerned. Therefore, there was close follow up by the Manchester Royal Infirmary Team about GRO-A's on-going physical health problems.

GRO-A's mental state continued to be that of Hypomania with pressure of speech, flight of ideas, delusions of grandeur, relating to his technical ability and at times he was refusing to have his Factor 8 injection, saying that he had 'tons of the stuff' in his body and he rejected arguments we would present to

PTO...

GRO-A

cont...5

him, asking and persuading him to take medication. GRO-A would be dismissive of our advice, regarding medication at times.

A possibility of a catastrophe bleed was very likely at that time with GRO-A when he refused to take the appropriate medication for haemophilia and any confrontation by our Team to give him the injection of Factor 8 would have heightened his level of arousal and the raising of his blood pressure trauma would be increased if he were to be restrained and given this injection against his will. Therefore, on balance, we would wait until his mood settled before attempting to administer Factor 8.

At this time, GRO-A had to be moved from the open Ward to the Psychiatric Intensive Care Unit for his own safety as his mental state continued to be of Severely Disturbed Hypomania and he was still deluded grossly.

Therefore, GRO-A needed anti-psychotic medication and mood stabiliser and we tried him on various medications for this.

GRO-A also had a Mental Health Review Tribunal held as he had appealed against the Section 3 of the Mental Health Act, in that a full and frank discussion with his Solicitor present had taken place. The outcome of that was the Mental Health Tribunal had upheld the decision of keeping GRO-A on a Section 3 as he had on-going mental problems although at that time he had started settling down slightly.

As there was some slight improvement, GRO-A was moved from the Intensive Care Unit to be nursed in the open Ward once again. At that time GRO-A used to ask me to allow him permission to go outside the Ward for a brief period as he would get bored inside the Ward and wanted to have some fresh air.

At first, GRO-A was given permission to go out with the Staff and he had co-operated satisfactorily to that and then he went onto ask me for permission to let him go by himself and he promised he would be within the Hospital grounds itself. Ours in a small Unit in Leigh Infirmary and therefore, GRO-A would plead for permission to be allowed because he felt so closed in and therefore it seemed reasonable for me to allow GRO-A with permission.

PTO...

GRO-A

cont...6

GRO-A was given permission to go out for a hour or so each day and that got increased because he kept to the agreed times of going out and coming back. He would wonder around the Hospital and make friends with everybody – GRO-A was a very talkative, pleasant and approachable person and he would talk to all visitors and patients and Staff and would like to have a laugh and a joke.

On a couple of occasions GRO-A did not keep to his agreement and went outside the Hospital grounds, which he was not given permission to do.

At that time I had allowed GRO-A to go outside the Ward within the Hospital Grounds because his mental condition had improved to such a degree that this was feasible and the right thing to do, provided he kept to his word and agreement.

There was a plan of rehabilitation for GRO-A, he would have undergone Parole Occupational Therapy Assessment, etc., because he always kept asking to go home but we had to make sure that he would have managed physically and mentally before this was allowed as we were concerned about GRO-A's welfare after discharge, whenever that would have been, because GRO-A had indicated during his stay that she was planning to divorce GRO-A and she did not want him to return to the house as she would not be able to cope with him.

This had upset GRO-A a great deal and therefore, he would have been given all the appropriate care whilst in Hospital to come to terms with having to live alone had he been well enough for discharge. We would have given him all the Social Services Care Package and allowed that at a later date perhaps.

However, around GRO-A 2000, GRO-A became physically unwell once again and after speaking to Dr Hay at Manchester Royal Infirmary, he was transferred on GRO-A 2000, from Leigh Infirmary into the care of Manchester Royal Infirmary, where he sadly passed away due to a chest infection.

GRO-A received the best possible attention and care what we could realistically do given our resources. I took care to involve the experts from

PTO...

GRO-A

cont...7

Haematology and Manchester Royal Infirmary for GRO-A's HIV and haemophilia problems as they had known him for such a long time and he was already ill when I saw him for the first time and sadly his mental state also had deteriorated and therefore he was admitted to Leigh Infirmary because of mental health problems.

I did visit GRO-A in Manchester Royal Infirmary and spoke to GRO-A on the telephone as I could see that GRO-A was terminally ill at that time.

As soon as I heard GRO-A had died, I asked the Mental Health Act Administrator to inform the Mental Health Commissioners of his death and also to inform the Coroner's Office about this.

I am of the opinion that, given all the above circumstances, everything that was possible was done to help GRO-A in his time of need.

Yours sincerely

Dear Ms Urwin,

Re: GRO-A (Deceased)

As requested in previous correspondence I enclose a copy of the statements that I received from Dr Bano, Consultant Psychiatrist at Leigh Infirmary, and from Dr Hay, Consultant Haematologist at Manchester Royal Infirmary, and finally a copy of the statement made by your client Mrs GRO-A. The cost for these is £14.00. Please forward your cheque payable to HM Coroner for that sum.

I do not propose to call Dr Bano to give evidence at the Inquest as although giving much background information he does not deal with the cause of death.

A date for the Inquest will now be arranged and you will of course be informed.

Yours sincerely,

LEONARD M GORODKIN

Oxford Road
Manchester, M13 9WL

Dear Dr Hay,

Re: GRO-A (Deceased)

I thank you for your letter and report dated GRO-A, although only recently received. I am writing in response to the final paragraph of your letter.

It is correct that I will be holding an Inquest, not because there is any doubt about the cause of death. But because the underlying cause appears to be unnatural. Your opening sentence states that the reason for HIV was acquired from blood product treatment in the early 1980s. It is this that makes the death from an unnatural cause.

I agree that nothing new will be learned from the process, and that the family may well be upset. Neither of those are reasons for not holding an Inquest and in due course when I have all the information I will proceed to Inquest.

Yours sincerely
