AIDS

You will be interested in the attached note which sets out the latest stock position of blood products manufactured from plasma collected prior to March 1983. Armour and Immuno show stock reductions from previous outputs and the increase in the Alpha figures is due to unallocated plasma now detailed for potential sale in the UK. I am unhappy about the return from Miles and await a further reply to our latest telex.

Do we need to take any further action on existing stocks of blood products blood products as a result of the August Congressional hearing? - Mr Wigglesworth's minute dated 23 August 1983 refers.
