Dear David,

Humanate Batch 1805

You will recall we corresponded previously concerning Batch 1805, as it seemed highly probable that this Batch was the cause of Non A Non B Hepatitis in three of our patients. I set aside our supplies of 1805 in the hope that further information would emerge to exonerate it, but the position remains that the Batch is probably the cause of the infection.

I have in stock 18\*400 unit vials of Humanate. I would be grateful if you could agree to take these back and give us a replacement from a different Batch.

Kind regards,

Yours sincerely,

GRO-C: Dr J F Davidson
