Rep. 101

attn: mrs. henninger

feiba/prothromplex/kryobulin tim 3 warnings

we propose the following statement, please confirm by telex that this is acceptable - we will change the feiba insert and perhaps you could incorporate the phrase in the kryobulin and prothromplex texts.

this change will hopefully prevent any problems arising from our claiming freedom from htlviii risk in the current climate.

'by careful selection of donors and plasma and the vapour heat treatment process, the transmission of htlviii can probably be excluded.

the above measures will certainly reduce the risk of transmission of viral hepatitis but this cannot be entirely ruled out.'

regards  
r. nicholson
