

PJK/DD.
Ref: Jaundice.

18th July, 1975.

Dr. C.G.L. Raper,
Department of Pathology,
Kingston General Hospital,
Beverley Road,
Hull, HU3 4UR.

Dear Dr. Raper,

re: SAINSBURY Nicholas - D.O.B. GRO-C 63.

Within the last few days it has come to my attention that twelve patients treated at this Centre have been given a material which has proved to be HBsAg positive by radio-immunoassay testing. The above patient received the material (Kryobulin factor VIII concentrate Nr. 09M6575) on the following date - 27th June, 1975.

Your patient fortunately has antibody to hepatitis B and hopefully this will protect him from becoming jaundice. Should he develop symptoms and signs I would be most grateful if you could arrange for two 10ml. samples of clotted blood to be sent to me for antibody and antigen tests.

Yours sincerely,

Peter J. Kirk
S.H.O. - Haemophilia.
