4th Dec 84

Dear Dr Attoft,

This is the chap with severe haemophilia A who was diagnosed as having AIDS in March 1983. Recently his weight loss has accelerated and chest signs have deteriorated.

Dr A.P. Smith has kindly agreed to perform a transbronchial biopsy on him. Could he have the following treatment*: ~3000 units of Factor VIII an hour before the biopsy and ~1000 units an hour before being transported back to UHW. Should he need to stay at Sully overnight, he will need some treatment - please liaise with me.

Yours sincerely
Guy Lucas

* which he has brought with him and is able to administer.
