Dear Dr Karakantza

**Linda Kitson DOB: GRO-C/1951**

**GRO-C**

I write regarding the above lady. She has presented with the hepatology services here in Bradford with abnormal LFT's and has gone on to have a liver screen which has suggested she has hepatitis B virus. She does not have any clear risk factors for contracting this other than having a blood transfusion in 1979 at the Leeds General Infirmary when she had a Valvuloplasty for mitral stenosis. The haematologist here in Bradford, Dr Adrian Williams who I believe is the transfusion lead, has suggest that I get in touch with you to see if we can investigate this matter a little further. Mrs Kitson is keen to be kept informed of any investigation into whether her hepatitis B could have been contracted from the blood transfusion she received at this time.

I look forward to hearing from you in the near future.
