Dear Dr. Gunson,

Re: Donor who has probably caused post-transfusion Hepatitis B

Thank you for your advice concerning this donor. As I mentioned on the telephone, he is now linked with two cases of post-transfusion Hepatitis B. His tests for HBsAg have always been negative but he has anti-HBc. Unfortunately we ran out of serum and could not test him for anti-HBs.

I wrote to him three times and the third letter has been returned by the Post Office marked "Not at this Address". He is not registered with a GP and there does not seem to be any way we can contact him. I wrote to a Doctor in each of the Transfusion Centres.

OK.

With best wishes,

Yours sincerely,

GRO-C
