Dear John

**RE: Hepatitis B Look-Back Study**

Thank you very much for the forms relating to Athkinson Morley's Hospital. We are very grateful for your help.

Please could you bear in mind that we can offer help going through old record books, if your laboratory staff would feel that an additional person would indeed be a help and not a hindrance! The majority of hospitals are able to complete this task quite easily, because the records are on computer. If this is not the case at St George's, then we would do everything possible to lighten the load on your staff. We are expecting to employ a student (whose brother is a medical student at St George's!) to help in the next few weeks, so do please get back to me if you could use some of his time.

With best wishes

Yours sincerely

**RECEIVED - 8 AUG 1996**

Dear Dr Hewitt

**Re: Hepatitis B Look back study**

A small start! These are the four unit number proformas for those blood components sent to the Atkinson Morley's Hospital. The blood bank at AMH was closed down 2½ years ago. We can trace three of the units, but one has sunk without trace; no record exists of its fate either in the AMH records or our own at St George's (blood was transferred down here after two weeks at AMH, and you resupplied AMH with newer units).

I am returning all four report forms. The St George's reports will take some time to come through. There are 82 of them, and all the old record books have to be gone through to pick them up - its laborious!

Yours sincerely
