9th June 1998

Dear Dr GRO-D

**RE: HEPATITIS C LOOK-BACK / DONORS WITH INDETERMINATE  
HCV SEROLOGY**

**PATIENT NAME: THOMAS FARRELL**

**ADDRESS:**

GRO-C

**D.O.B.:** GRO-C35

We have been reviewing the records of previous donations from donors now known to have indeterminate results in an assay for Hepatitis C. The Health Department have decided that the recipients of blood transfusions originating from such donors should be traced so that they may be offered appropriate counselling, testing and follow-up including consideration of treatment.

According to the available records, the above patient was transfused with a blood component which was possibly infected with Hepatitis C on 11.10.1989 while under the care of Mr Behl at the Freeman Hospital, Newcastle. Mr Behl is aware that I am approaching you with this request.
