Re: Peter Burney (DOB GRO-C 58)

52 ♂

Dear doctor;

[This gentleman is an inpatient on Ward B4 (GRO-C
at present. He has end stage liver failure 2° to hep C
and possibly an 8 year period of alcohol dependence in the
1990s.

He is very unwell at the moment. He has had
multiple admissions over last few months for drainage
of ascites. He was only discharged by Dr GRO-D one week ago,
but has been readmitted with 15L drained. The fluid
is accumulating so quickly that we are unable to discharge
him.

We have today spoken to the family - they are aware
of how sick the patient is and have agreed DNAR. We feel
the only option to help this man would be for a shunt to
be considered. He has an appointment with Dr GRO-D
on 4/1/11 but if left untreated, the fear at our end is that
he will not survive. He is booked for USS doppler portal vein.

Dr GRO-D requests this patient be transferred as
an inpatient to MRI urgently. I have attached a copy
of Dr GRO-D letter to Dr GRO-D as well as recent bloods.

Many thanks.
