Dear Peter,

On behalf of Lowell, Greg and me, belated thanks for your time in discussing factor VIII/factor IX and for showing us around PFC the other week. I hope my eyes were not too obviously an envious green while seeing the benefits of a purpose-built laboratory, especially considering the expansion of the place since my visit seven years ago.

I understand that the dog trials on heated factor IX are on schedule, though we may change our contribution to take account of the recent AT III-additions work.

In the meantime, thanks once again.

With best wishes.

Yours sincerely,

GRO-C

P.A. Feldman.
 Project Scientist.
