Dear Mr Chalk

Colette O'DONNELL GRO-C 59
GRO-C

Thank you for seeing this 28 year old nurse at short notice. She is under the care of Dr Kernoff as a haemophilia A carrier which has required peri-operative treatment with factor VIII on several occasions on several occasions. I understand that she is currently living and working in Saudi Arabia but has contacted us following her return to this country complaining of considerable menorrhagia and increased frequency of her periods up to twice a month.

I see that on review she was seen in May 1985 for a similar problem although her periods now sound considerably more frequent. Her menorrhagia has been controlled in the past by the oral contraceptive pill but after contracting non-A non-B hepatitis following a factor VIII infusion, GRO-C

GRO-C

Her factor VIII level is 32% and it is possible that this contributing to her menorrhagia, but I would be grateful for exclusion of any other pathology.

Should she require any operative procedure she would probably require treatment pre-operatively with intravenous DDAVP and tranexamic acid but this would depend on the nature of the operation.

Yours sincerely

GRO-C

Matthew Lyttelton MRCP
Registrar
