DR MILLS' HEPATITIS CLINIC

Dr GRO-B

GRO-B

GRO-B

Dear Dr GRO-B

RE: GRO-B

DOB: GRO-B<sup>54</sup>

Thank you for referring this lady who I saw today on Dr Mills' behalf. She acquired hepatitis C in January 1986 from a blood transfusion given during a myomectomy. She is asymptomatic. She drinks 2 glasses of wine per week and is on no medication. She had a total hysterectomy 1993.

On examination she looked well and there were no signs of chronic liver disease. I had a long talk with her today about the implications of hepatitis C infection and I think the next logical step would be to do a liver biopsy in order to assess any ongoing damage. I have checked some routine blood tests today and we will give her a further appointment for the clinic once she comes in for her biopsy.

Yours sincerely

James McPeake  
Senior Registrar
