Dear Dr.

GRO-B

GRO-B

ADMITTED 24.11.1992

DISCHARGED 11.12.1992

DIAGNOSIS ^RPOST HEPATIC NEURALGIA
MICRONODULAR CIRRHOSIS

HISTORY This patient was referred by his GP with gradual onset of abdominal pain more marked in the right upper quadrant. It radiated to the right shoulder, right flank and occasional to the leg and the buttock. It was associated with nausea and vomiting. He had a past history of micronodular cirrhosis.

On examination there was tenderness in the right upper quadrant but no other particular abnormality. Investigation of this patient's right upper quadrant with radiology, ultra sound scan extra showed no abnormality and the SHO eventually obtained a history of shingles along the same dermatome as the pain several years previously. The patient was commenced on Carbamazepine and on this his symptoms rapidly resolved. The patient was discharged home on:

CARBAMAZEPINE 100 milligrams od
