Dear Doctor,

We wrote to you in January this year informing you that FEIBA heat treated was licensed for sale in the United Kingdom. This product is heat treated by a dry heat method for 10 hours at 80 degrees C.

Our company in Austria have now developed product specific steam treatments and their policy is to change over to steam treatment in all countries. They are no longer able to produce the dry heated product for the U.K. as all other countries have already changed over to steam treatment, including the U.S.A. where the product is known as Feiba vapour heated and was licensed in March 1986. The product specific steam treatment for Feiba is 10 hours at 60 degrees C. at an excess pressure of 190 mbar and a further treatment for 1 hour at 80 degrees C. at an excess pressure of 375 mbar.

From today's date we shall only be supplying Feiba steam treated. This can only be issued on a doctor/patient basis until we have amended our current Product Licence. The price for Feiba steam treated will be maintained at 30p per unit.

We have applied for a variation to our Product Licence and we will inform you as soon as this has been approved.

We will be pleased to answer any queries you may have concerning this new product.

Yours sincerely,
for IMMUNO LTD.

GRO-C

P.J. Coombes
