Dear David,

The answer to your wondering is no - UKHCDO does not have a view on viral screening for PUPS. Obviously the screening would need to be appropriate to the risks of the particular Recombinant product, ie. if they contain albumin then presumably you would screen as if they were receiving plasma products. It was discussed at some point but agreement was never reached.

With kind regards,

Yours sincerely,

**Frank G.H. Hill**  
**Chairman - UKCHDO**
