Dear Dr. Lushington,

re: William MURPHY, GRO-C, Liverpool GRO-C

This gentleman with haemophilia remains well. He has had no spontaneous bruising although he did fall over and suffered a severe bruise over the metacarpophalangeal of his right index finger and some bruising of the thigh. He has had no further trouble with indigestion and has been off the Cimetidine completely for at least two months.

If you remember we had to delay any treatment for his teeth when he became hepatitis antigen positive but I am now trying to rearrange this with our Dental Department.

Yours sincerely,

GRO-C

C. BASS

Senior House Officer
