Mrs. Hirsch came to discuss hepatitis C - husband was to have come with her but unable to come today for various reasons. Videotaped -

"Nicholas is a changed boy." Getting on well with parents + since being in care has recovered all his former energy + sense of humour. Much of the change in attitude attributed to the education received during his years at William Ellis - not academic education but introduction to the "real world". Has arranged to transfer to a private 6th form college next year. Motivated to work hard. Playing in children's county junior basketball Championship - partnering twin brother in the doubles.

Mrs. Hirsch feels this family is "a normal family again, with some of the chaos caused by normal teenage boys"
