

ITE Dr. Matthews

11/9/1. As we are not able to perform the necessary tests for factor IX & apolipoprotein I suggest we measure 250 units heparin / liter I.V. now meaning to 500 u/lw immediately post op.

He is HIV - & Hep B negative but should be treated as a "viral infection".

I shall arrange factor IX treatment at Nason in preparation for surgery early this pm.

GRO-C

11/11/1 CES

Abdominal exam. Retroperitoneum not well seen but prostate looks normal for his size just below rectal anal in palm.

GRO-C

11/13<sup>45</sup> - Dr. Manson phoned from haematology - clotting is OK for ~~op~~ surgery.

GRO-C

11/14/1. - Laparoscopy - Long incision - good view of most of abdomen, no obvious abnormalities. No chills / Dr. Miller / Dr. English
