CAL/MJ GRO-A

19 February 1997

Dr Miles
113 East Barnet Road
New Barnet
Herts En4 8RF

Dear Dr Miles

GRO-A GRO-A 20
GRO-A Herts GRO-A

This 77 year old ex-motor mechanic came for his annual review on 18th February. He has haemophilia a with a factor VIII level of 3 u/dl. He was not infected with HIV and he appears to have cleared hepatitis C. He was last treated with factor VIII in 1993 for dental treatment.

On functional enquiry, there are no problems. He has been vaccinated against hepatitis A and B. He was first treated with factor VIII on 19th January 1977 and he now has a very weak equivocal HCV antibody, is PCR negative and has consistently normal transaminases. Thus it appears that he has cleared hepatitis C infection.

He lives in his own house. Although his wife is alive, she has poor memory and is aged 76. He has one daughter but she has no children.

Thus, there are no problems with this man. He is aware that he needs to contact us, should he need any operations or has any trauma in the future but, it is most pleasing to see that he seems to have naturally cleared hepatitis C and he was never infected with HIV.

Yours sincerely

GRO-C

Christine A Lee
