Dear John

REGISTERS OF POST TRANSFUSION HEPATITIS AND HBsAg DONORS

I have been very disappointed over the years to have had no acknowledgement of my reports. So much so that I don't think I have sent you any PTH data since 1983.

The HBsAg donor report is less troublesome and I have been completing it for some years. Once again without either acknowledgement or access to information on whether others were reporting. It came as a surprise to me that a 1987 national cumulation existed and had been circulated to Drs Mitchell, Gunson and Cash nearly a year ago.

I now enclose our data for the first part of 1991. There are one or two others to come who have either (a) not been interviewed or (b) have anomalous HBsAg findings which we would like to consider in more detail before reporting.

With kind regards
Yours sincerely

GRO-C
