London  
NW5 2UP

Dear Dr. Dickinson,

Re: Mr. Mark STEWART - D.o.B: GRO-C 1968  
GRO-C London GRO-C

I saw Mark Stewart today the 12<sup>th</sup> of November to discuss issues regarding vCJD. He has received clotting factor concentrate of British donor origin between the years 1980 and 2001 and therefore is at risk of vCJD for public health purposes. I have discussed the issues that were detailed in the patient information sheet. His question was of who to blame and he was also concerned about hepatitis C. He was PCR negative for hepatitis on the 25<sup>th</sup> of November '02 and has normal enzymes and therefore falls into the category of natural clearer. I have explained that 10-15% of patients who were infected with hepatitis C cleared naturally.

Yours sincerely

GRO-C

Christine A Lee  
Professor of Haemophilia
