Dear Dr Momen

Derek WHERRY - GRO-C 75 GRO-C

This 22 year old man, who has severe haemophilia A, came for his review on 28th April. He works in motor finance for Lombard. He is HIV negative but, infected with hepatitis C. He uses prophylaxis, 2000 units, every 3rd or 4th day and he uses Replenate – his access is good.

In general, he is well, although he has had a number of upper respiratory tract infections since the New Year.

I have initiated hepatitis A vaccination, which needs to be repeated within the next six months. He has good antibody to hepatitis B. He was reviewed by Dr Mistry in the Liver Clinic in October 1996, when it was ascertained that he has type 1 hepatitis C with a viral load of 29.2×10^8 . He has abnormal transaminases and it is likely that he was infected with hepatitis C about 25 years ago. He had an ultrasound on 23^{rd} October 1996, which was normal. I had a long discussion with him about hepatitis C and I have suggested that he ought to have some treatment with combination therapy at some point, although he might prefer to wait until there are more therapeutic options available. I thought after our long discussion, the best thing was to review him in the Liver Clinic in the autumn.

Thus in conclusion, he will continue on prophylaxis to treat his haemophilia, he has had an hepatitis A vaccination and we will review him in the Liver Clinic in the autumn.

Yours sincerely

Dr Geoff Dusheiko Consultant Hepatologist C/o Haemophilia Centre **RFH**

Dear Geoff

Derek WHERRY - GRO- 75

GRO-C

This patient has severe haemophilia A and is infected with type 1 hepatitis C. He was seen by Dr Mistry in the Liver Clinic in October 1996, when a number of baseline investigations were achieved - he had type 1 hepatitis C, with a viral load of 29.2 x 10⁶. He had an ultrasound on 23rd October 1996, which was entirely normal. He had an alpha fetoprotein performed in 1996, which was 3, and his transaminases are marginally elevated.

When I saw him for review on 28th April, I had a long discussion with him about the possibilities regarding treatment. However, he seems very reluctant at this stage. I explained that it would probably be helpful for him to be reviewed in the Liver Clinic and to think more about the possibilities regarding treatment in the meantime.

Yours sincerely

GRO-C
